Maya — AI client intake, built and running

A working AI intake assistant for a law firm website, plus the automation behind it. Built by me with Claude; live demo at **/demo/law-intake**.

WHAT HAPPENS WHEN A POTENTIAL CLIENT VISITS AT 11PM

Visitor chats with Maya → Practice area + urgency identified →
Name, contact, conflict-check parties collected → Structured lead sent to CRM / Google Sheet →
Urgent? Attorney alerted instantly

GUARDRAILS A LAW FIRM NEEDS

- Never gives legal advice or predicts outcomes
- States that no attorney-client relationship is formed
- Stops visitors from oversharing confidential details
- Only states approved firm facts, with no invented reviews or results
- Refers out matters the firm doesn't handle
- Resists prompt-injection ("ignore your instructions")
- Replies in Spanish when the visitor writes in Spanish

HOW IT'S BUILT

- Claude model, with rules written in plain English so staff can review them
- Secure server function: the API key never reaches the browser
- Rate limiting and input validation
- Webhook hand-off to Zapier / Make / n8n
- Zapier: Google Sheets row, Gmail alert for urgent leads, CRM record

HOW THIS MAPS TO THE ROLE

Build AI workflows and automations	An end-to-end intake flow: chat → structured data → CRM → alerts
Prompts, custom GPTs, internal tools	A production system prompt with tested guardrails and a strict output format
CRM + Google Workspace	Leads land in Sheets/CRM automatically, and urgent leads trigger email
Test and troubleshoot	A "try to break it" test list run before every change
Training and adoption	Plain-English rules and a demo script that staff can follow

WHAT I'D BUILD IN MY FIRST 90 DAYS

Days 1–30: listen and quick wins

- Shadow intake, admin and paralegal staff
- Shared prompt library for drafting and summaries
- Automate one repetitive task end to end

Days 31–60: intake and CRM

- Website/after-hours intake like Maya
- Auto-create CRM records and consult bookings
- Document and email summarization workflows

Days 61–90: scale and train

- AI best-practices and confidentiality guide
- Staff training sessions and office hours
- Track hours saved per workflow

Silver Mesa Law Group is a fictional firm used for demonstration. Maya is not a lawyer and gives no legal advice.
